

Hunters and their involvement in wounding

July 2021

Niels Søndergaard
Director of Advising and Education

Danish Hunters' Association

Niels Søndergaard

Director of Advising, and Education at the Danish Hunters' Association.
(Includes the Wildlife Management School)

Education: Wildlife manager, forester, degree in management and miniMBA.

Experience:

Head of Game and Wildlife Advisory Services in HedeDanmark a/s, which is Denmark's leading actor on forest and landscape enterprise services and trading.

Forester/ranger and assistant for wildlife consultants The National Forest and Nature Agency, Ministry of Environment.

Danish Hunter's Association

- Main target is voice of hunting and hunters
- Vision: As much hunting and nature as possible
- 90.000 members (Population in Denmark is 5.800.000)
- 17.000.000 AUD annual turnover - from membership (Membership: 170 AUD pr. year) and funding's - task's from government, wildlife management projects, research etc.
- 55 staff

Sustainable use provides the basis understanding for protection of nature

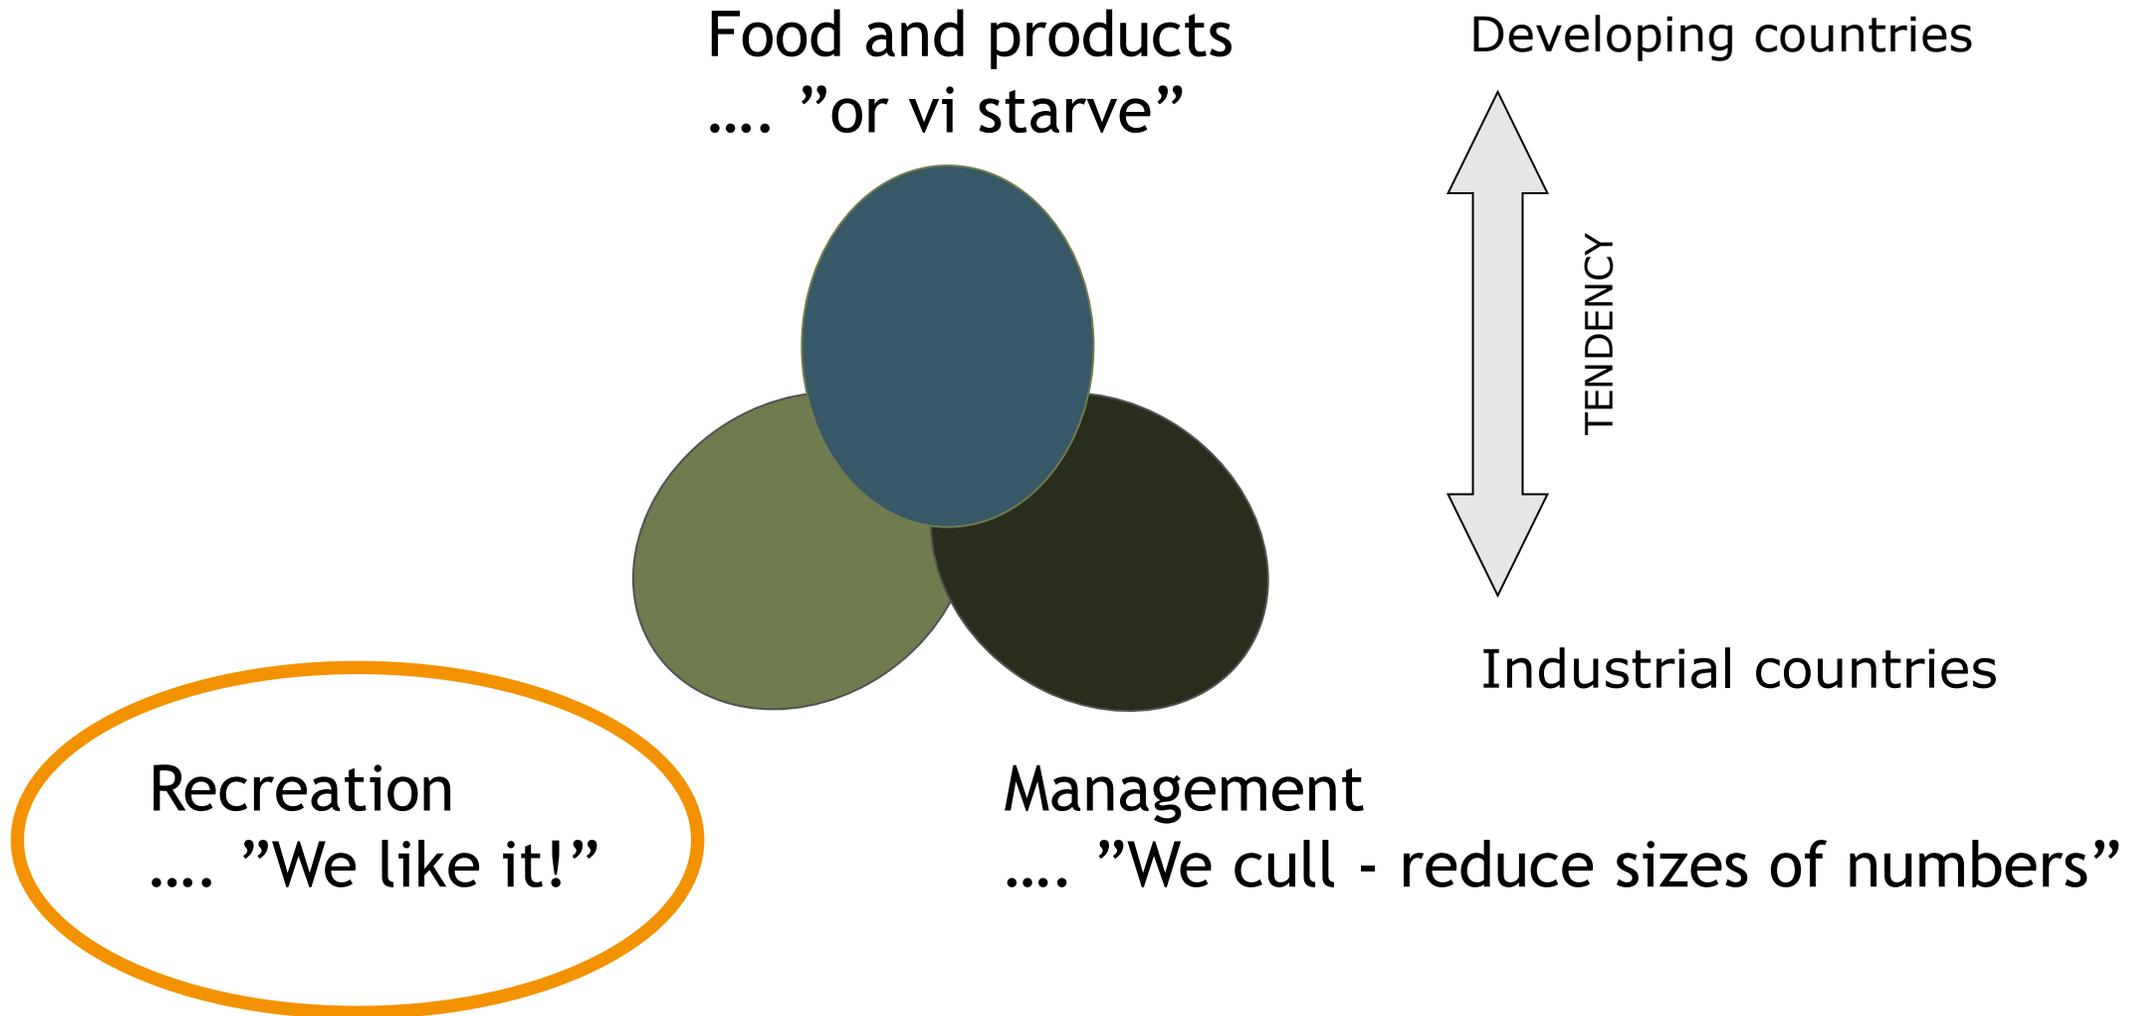

I hunt

- Because I like it!
- Because is a natural thing to do - it is a drive!
- Because it is a part of our culture, and tradition - has been the most important part of survival!
- Because it is recreation and gastronomy!
- Because it is sustainable use of a renewable resources!

Why do we hunt?

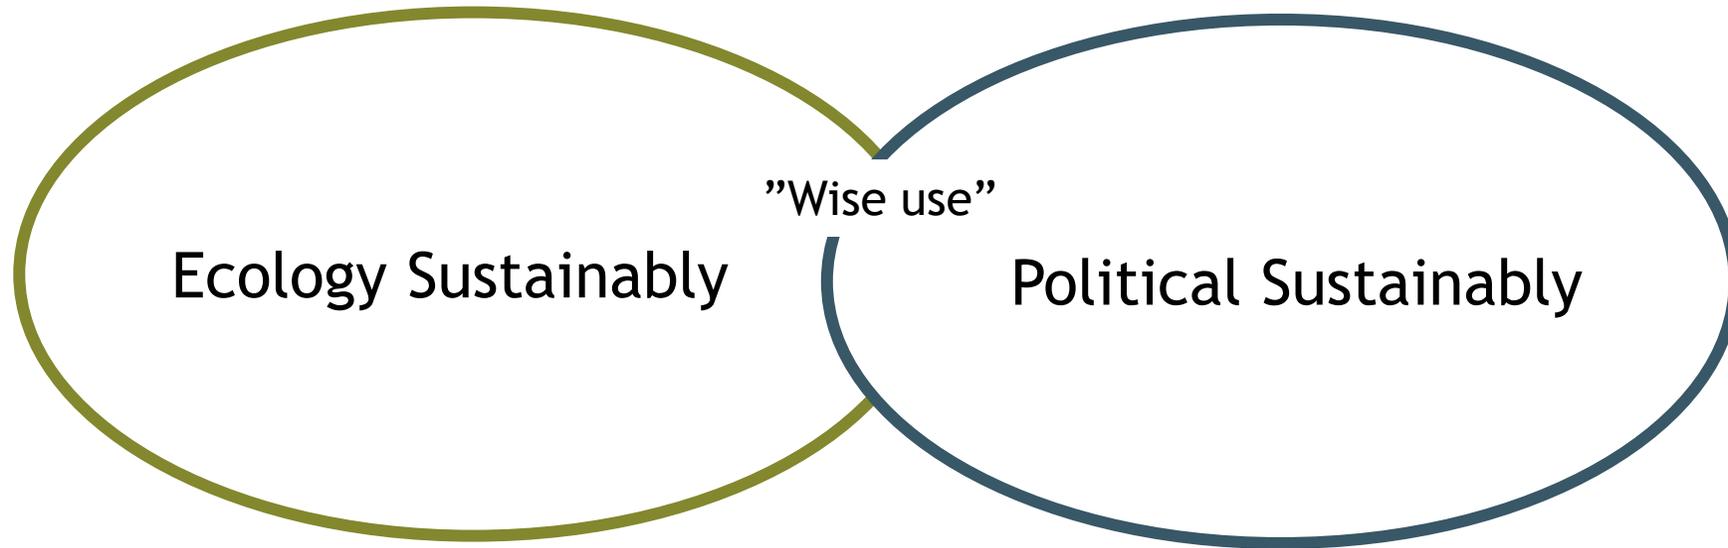

Public opinion in the EU

- Hunting is not a problem
- Hunters behavior is!

Sustainably use - wise use

Hunting Politically you can argue for a lot, but if it is vulnerable....

Hunting in Denmark

- 5.8 million inhabitants. Total area 43.000 km². 134 inhabitants per km²
- There are approx. 220.000 hunting licenses all eligible in Denmark. On average, 175.000 redeem their hunting license every year.
- On average 4.500 new hunters does the compulsory test for hunting license each year. (Theoretical, practical test and a shooting tests rifle, shotgun, bow) and that results in approximal 2.500 new hunters every year.
- New hunters has to be 16 years old to do the compulsory test. They can hunt alone when they are 18 years old.

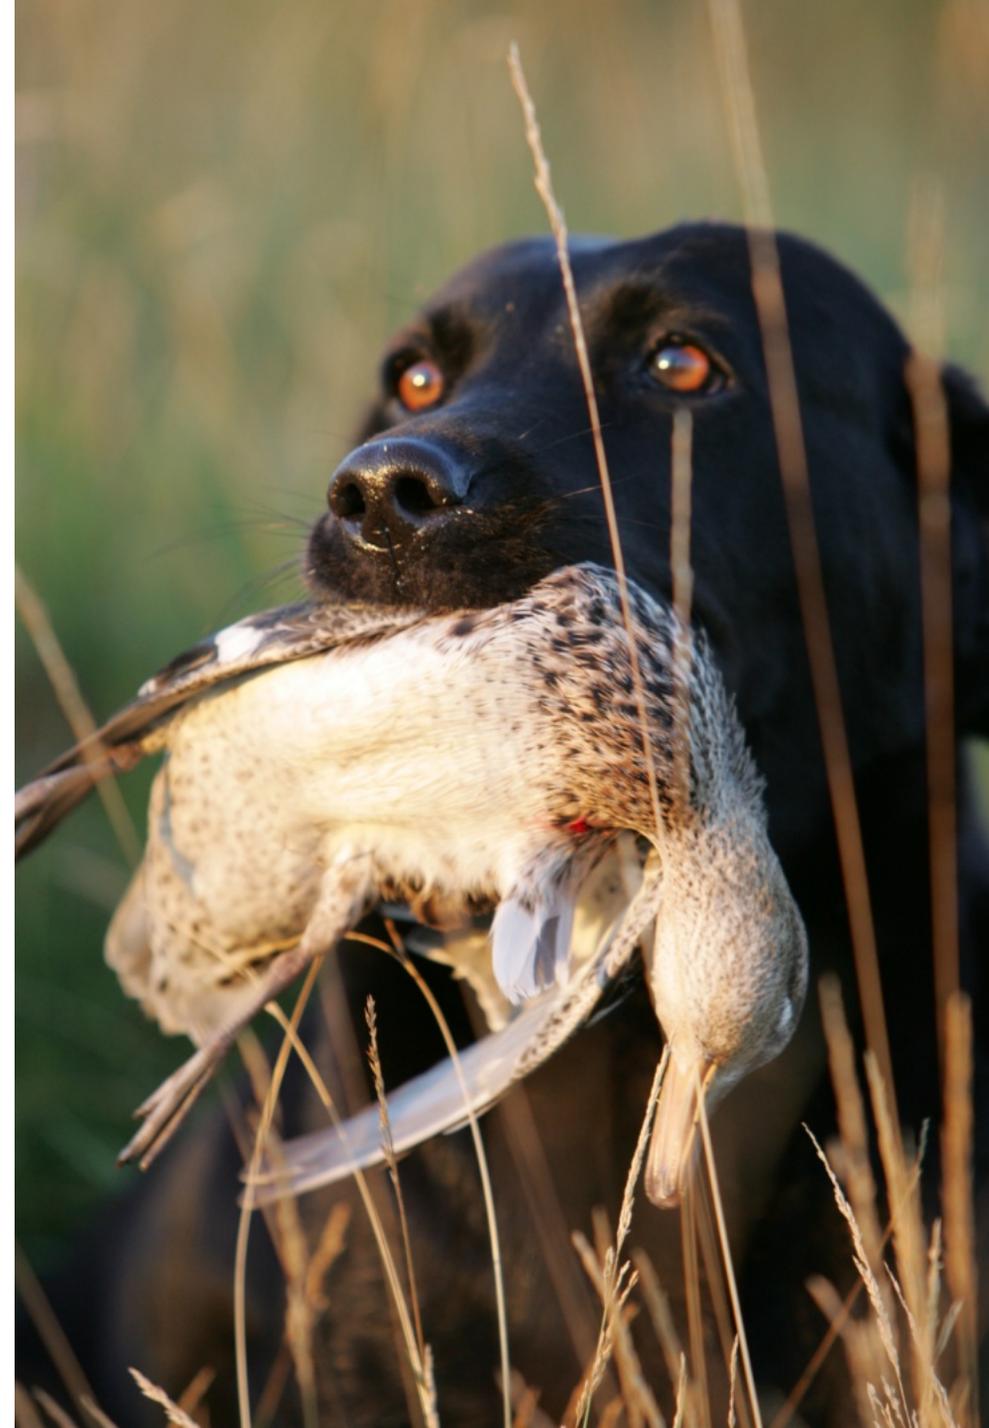

Hunting opportunities

- Hunting opportunities is a privilege, not a matter of fact!
- Hunters are responsible for the future of hunting opportunity

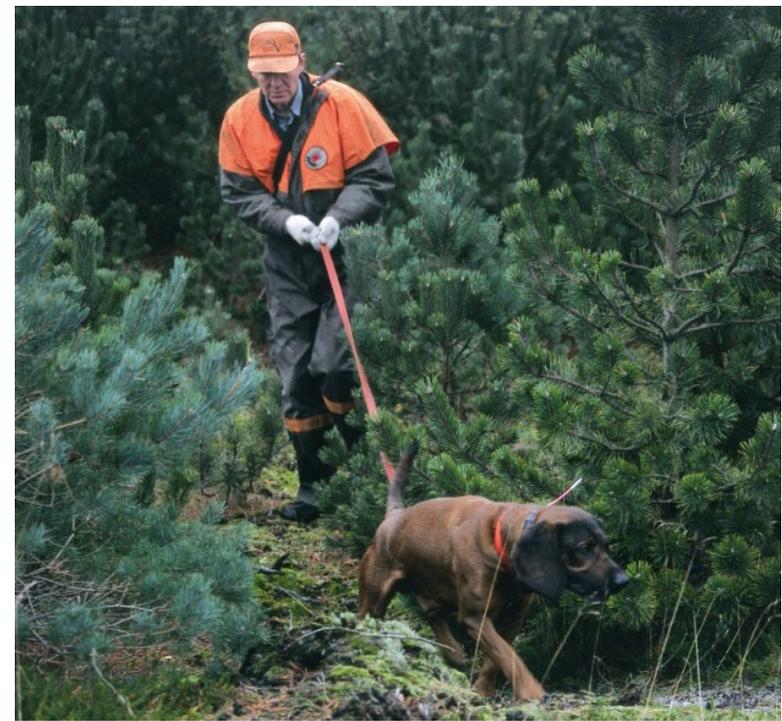

Hunting rights

- Hunting rights follows the ownership / use rights.
- Hunting rights may not permanently be separated from ownership.
- Hunting rights can only be let out for a maximum period of 30 years.
- The right to hunt duck & waders, except woodcock and farmed mallards, may not be transferred to others for periods of less than 1 year.
- Hunting rights on the sea territory is free and can be driven by anyone with a valid hunting license and permanent resident in Denmark .

Danish hunting culture

- It is mandatory to bring a retrieving dog when hunting with shotgun.
- Use of tracking dogs for finding wounded deer have a long tradition in Denmark.

Wildlife Management Council

Legal basis:

Act for Hunting and Wildlife Management

Members:

- Chairman - independent
- Danish Hunters' Association
- Danish Society for the Protection of Nature
- Dansk Agriculture 2 members (Land owners)
- Birdlife Denmark
- Danish Forestry Society (Land owners)
- Animal Welfare
- The Outdoor Council

Advises the Minister of the Environment in management of wildlife and hunting

No formulated targets and action plan. Possible involvement and open approach . Joint decisions - long and open process !

Paradoks

Launching a goal and action plan for execution. Ability to correct targets and action plan and quickly move on – short and closed process !

Experience
Dissatisfaction
No mastered
it, call
planning, lack
of
involvement

Experience
Dissatisfaction
Manipulation,
no possibility of
influence, top-
down, etc.

The wounding phenomenon

Definition:

“Wounded game, not retrieved/collected”

The problem:

- Economic - Meat and Trophy
- Animal protection/welfare - Unnecessary disorder
- Hunting success - the joy of hunting

Hunting causes:

- Bad shooting
- Poor distance assesment
- Shooting over personal ability
- Bad weapon/ammunition

Acceptance from the hunting community that there was a wounding problem

Taking the leadership - be responsible for the problem:

1. Accepting and facing the problem - the burning platform (Kotter)
2. Participate in mapping the problem
3. Contribute to the solution of the problem
4. Participate in evaluation and follow-up - it is a process!

What do we want?

Remove shooting - remove hunting!!

The risk of wounding depends on several things:

- Hunting techniques
- Size of the animal
- Hunter behavior and training

NO LIMITED LIMITS CAN BE SET

Main problem:

- Hunters are shooting at far to long distance!

Approach to Hunter attitude

- Recognition of the problem
- Education
- Hunting techniques - development/training
- Information
- Knowledge
- Weapons/ammunition

But first history on how we phased out lead shot

1975 onwards:

- Experience from USA of lead poisoning of waterfowl
- Dead mute swans (*Cygnus olor*) on Danish localities
- Big numbers of lead pellets, detected in certain locations
- A general political and public worry about environmental lead contamination

1981:

- Restrictions on use of lead at shooting ranges with fall-down in wetlands
- Debate on the use of non-toxic shot started
- Hunting organizations strategy was to create as many "problems" with non-toxic shot as possible
- The result was a misinformation among Hunters

1985:

- Ban on use of lead shot in 27 Ramsar sites
- And in ponds with release of Mallards (*Anas platyrhynchos*)
- Additional restrictions on sport shooting with lead

1996:

- Total ban on use, trade and possession of lead shot

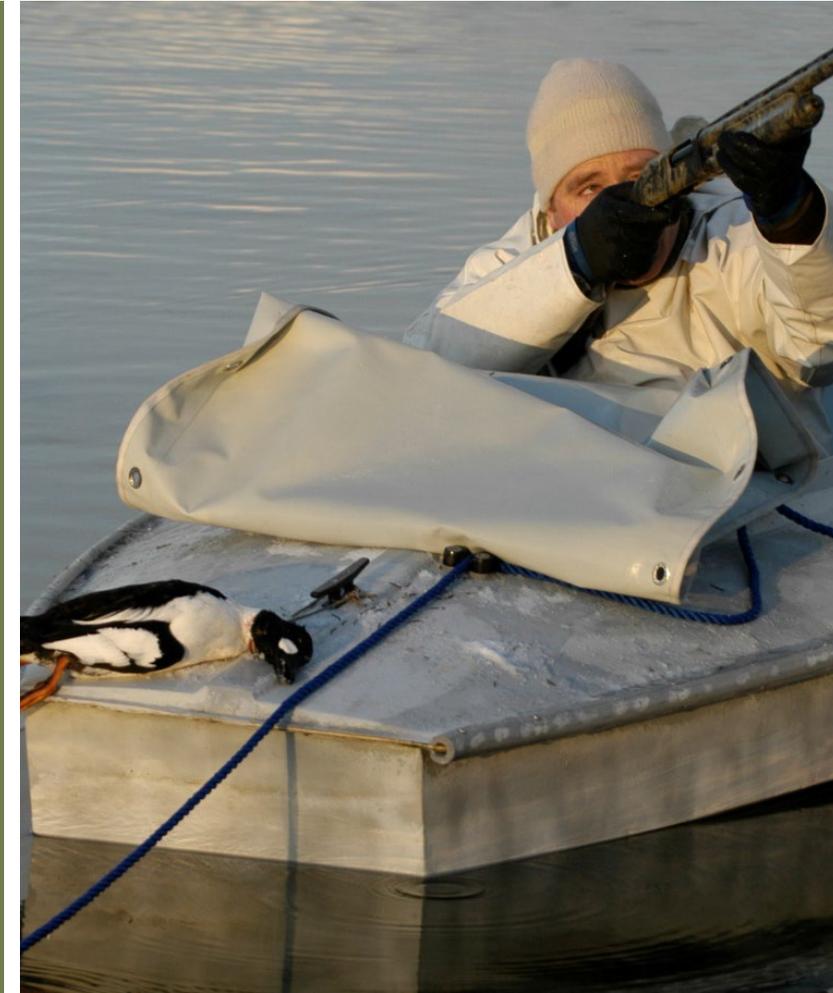

Conclusion

What did we lose?

- Nothing!

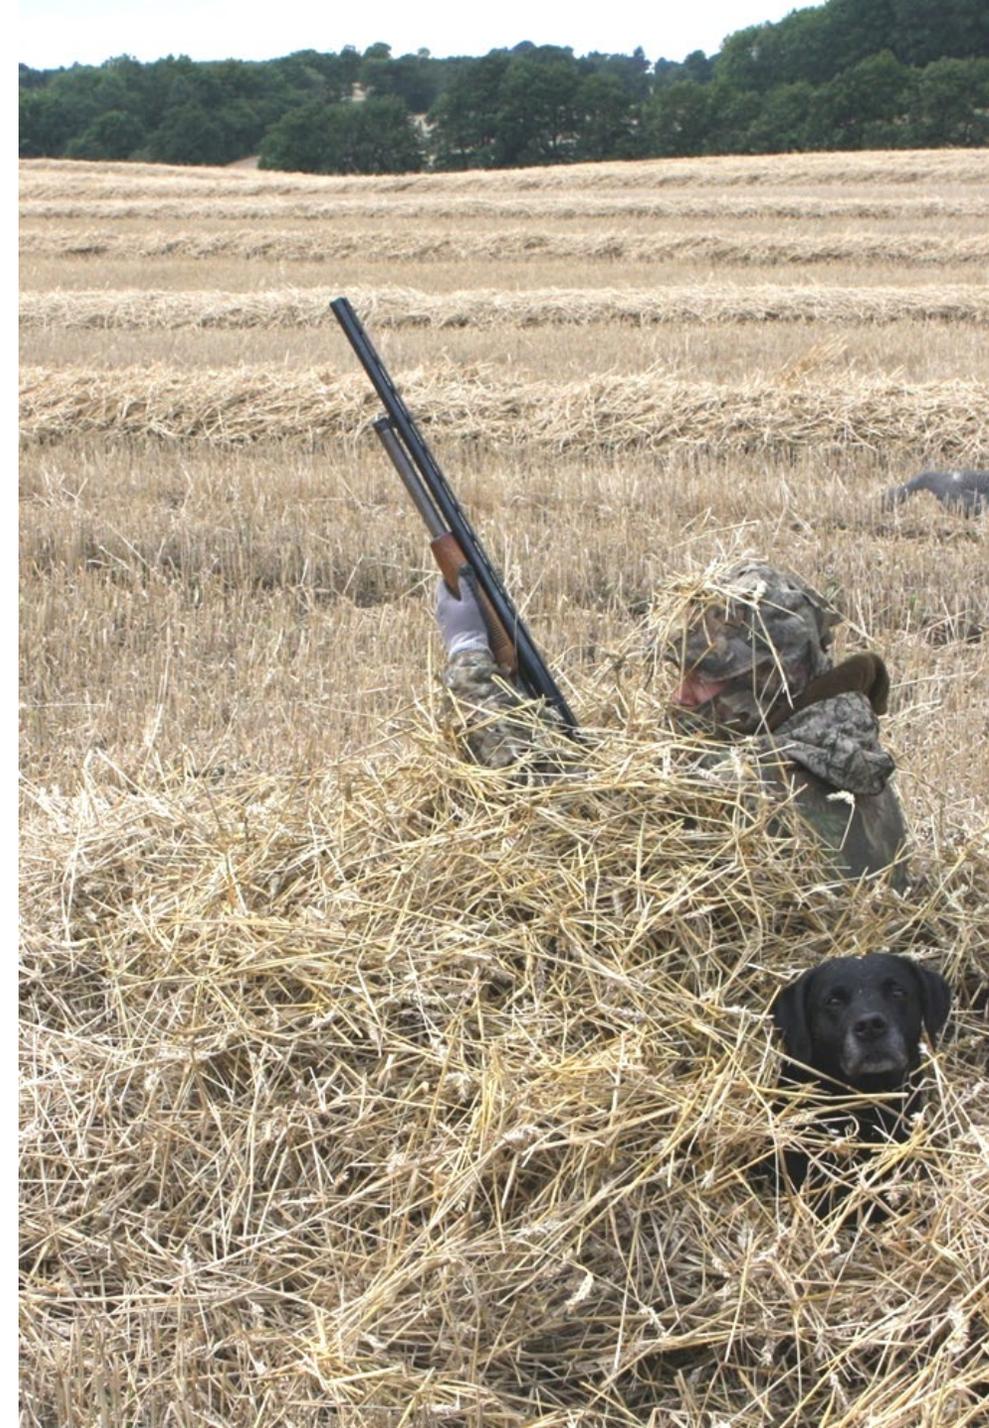

What did we gain?

- An improved environment
 - Reduction on mortality at the mississippi flyway since lead-ban mid 90-ties
- A stronger political position as lead shot is no longer a political issue
- Hunters image are improved by showing environmental responsibility
- Cartridges of high quality at a fair price

History

- The transition to lead-free shotgun ammunition coincided with the investigations regarding wounding
- Many Danish hunters therefore concluded that the reason for wounding's was the lead-free ammunition
- The task was to convince the hunters that alternative shotgun ammunition could be used for hunting It quickly became clear that the quality of the lead-free ammunition was crucial to success

Important approaches and goals to achieve

- Gain ownership of the problem and that it is a every hunters problem.
- Build confidence in the available shotgun shells - it is not a matter of equipment.
- Achieve owner ship - no owner ship = no real will to change behavior
- Formulate simple guidelines and best practice
- Good co-operation with researchers, authorities and manufactures of ammunition etc.

Participate in research - collecting data

Task force ammunition

- To ensure the quality of shotgun ammunition used for hunting.
 - Speed
 - Uniform pellets
- The Danish Hunters' Association collects cartridges at retailer level/gun shops for testing. Send to independent test center, which performs speed and pressure measurements

Talks and meetings in hunting clubs

Testing New Ground STEEL SHOT STUDY FINDS FACTS FOR PHEASANT HUNTERS

BY CRAIG BIHRLE

If a day of pheasant hunting is ever unpleasant, Jerry Feist experienced one. A participant in the first-ever scientific test of shotshell efficiency on ring-necked pheasants, Feist's task on that day was to bag six roosters at long range. The day had advanced from mid-morning to almost supper time, and Feist was the last of six hunters who had not completed his mission.

long-distance birds, Feist had a particularly challenging outing. An experienced pheasant hunter, the normally jovial Jerry would just as soon have cased his 12 gauge on this hot early October afternoon, but since this was an important test of ammunition that required a certain number of birds shot at several distance increments, he persevered.

ANSKYDNING AF VILDT

Undersøgelser 2013-2015

Teknisk rapport fra DCE - Nationalt Center for Miljø og Energi

 AARHUS
UNIVERSITET
DCE - NATIONALT CENTER FOR MILJØ OG ENERGI

nr. 70

2015

Three tips

It is important that all hunters train their shooting skills and always make a correct distance assessment so that fewer animals are shot

Remind yourself and your hunting buddies of these three things:

1. Think before you pull the trigger
2. A good hunter only shoots when there is a good chance of hitting
3. The best hunter is the one with the best shooting statistics

Formulated Guidelines/best practice

- Be aware of your shooting skills
- Train your shooting skills to prevent wounding
- Advise and help other hunters to reduce the number of shots
- Only try double if the chance is obvious. Never double roe deer with pellets
- Your consumption of cartridges should not exceed three per killed piece of flying game and two per piece of running game one shotgun hunting
- Think twice before pulling the trigger
- Only shoot when there is a good chance of hitting
- Demonstrate good morals and responsibility

TOTA

Recommended shooting distance

- Roe deer 20 meters
- Fox and geese 25 meters
- Pheasant, duck, partridge, pigeon etc. (35)30 meters

shooting versus
hunting-related
shooting

Hunting-relevant practice shooting!

Hunting methods:

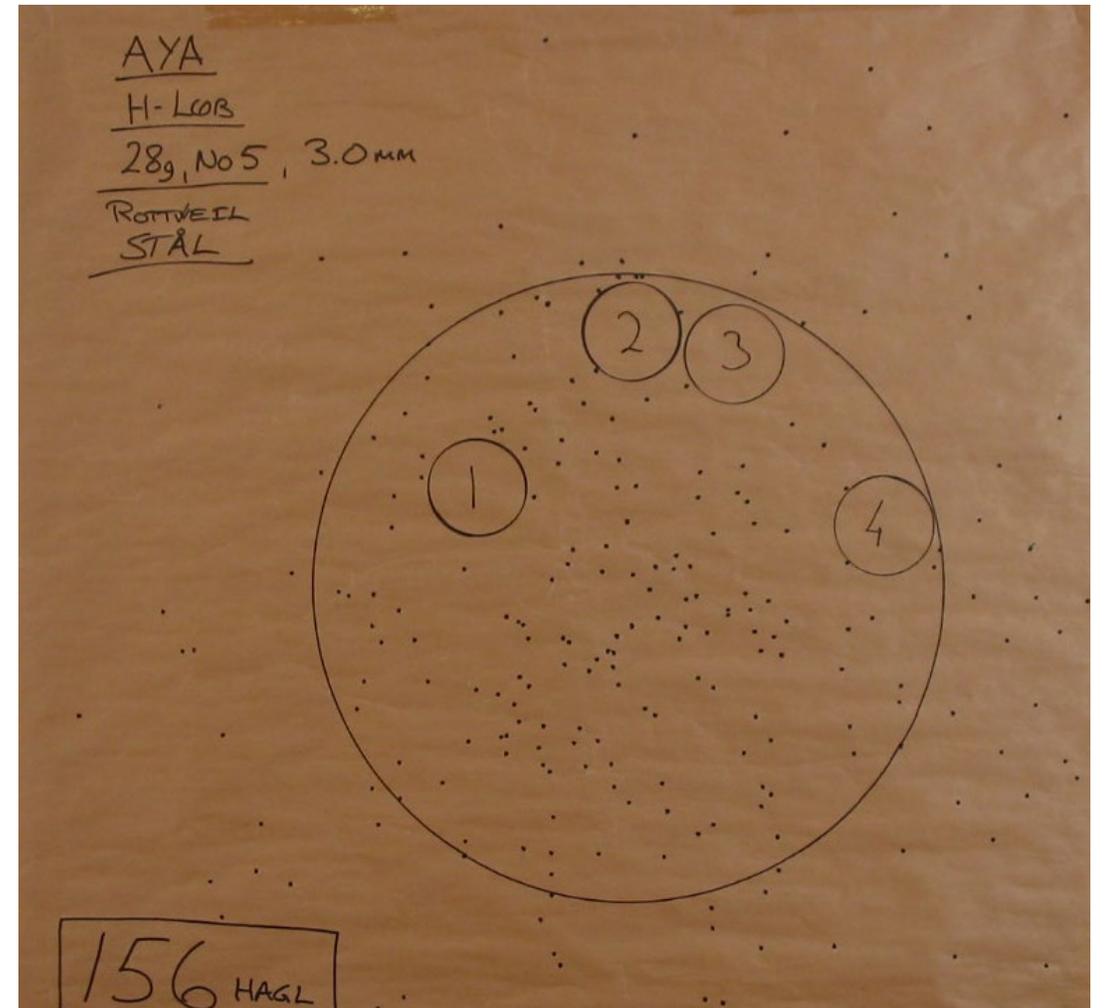

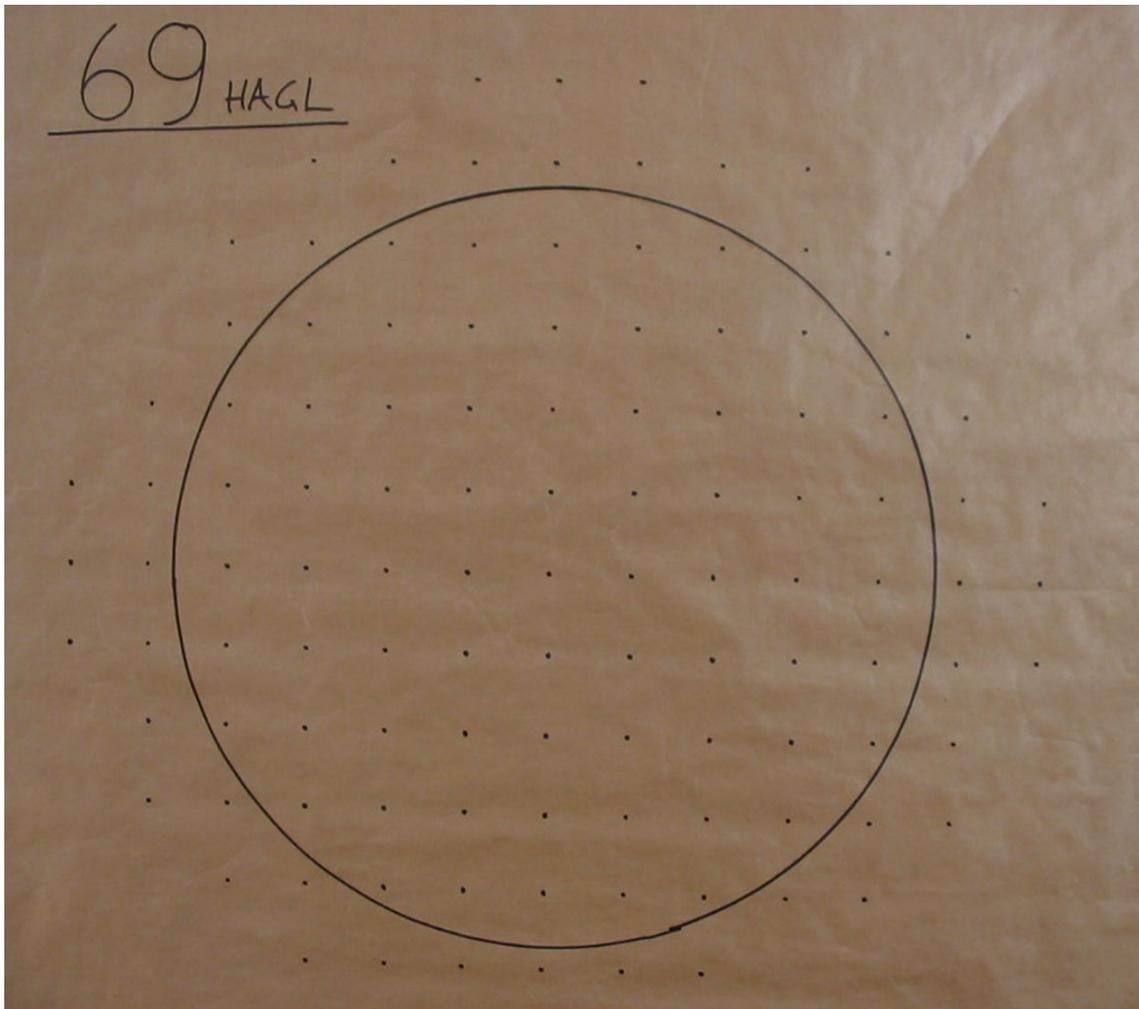

- 85% improvement in motorboat hunting - if done right
- Hunting at dusk time: Fewer shots, the darker it is - less wounding's
- Setting up decoys and hide right helps to reduce shooting distance

Test shooting shotgun - finding the right cartridge for your gun

Red and yellow card

- Hunters were encouraged to give each other a red or yellow card when hunters didn't shoot at the right distance.
- Self justice among hunters are fare more efficient than authorities telling hunters what to do and not to do!

Red and yellow card

- We have seen you shooting at fare to long distance!
- We have seen you wounding!

De gode råd
Det er vigtigt, at alle jægere bærer deres skydetøj, der skal være synligt og altid forsynet med korrekt alttidsudrustning, så færre dyr bliver anskudt.

Mind dig selv og dine jagtgenmæder om disse tre ting

- Tænk dig om før du trykker på afbækkeren
- En god jæger skyder kun, når der er en god skudsstatistik
- Den bedste jæger er den med den bedste

Jagt må ikke medføre dyrs lidelser
Dyrvelbet er uligt. Men hvis man skyder på vilt på for lang afstand, tager chancen og hver anskydning er resultatet ikke dyrvelbet. Jægere skal derfor altid bestemme sig på et undgå anskydninger af hensyn til viltet.

Jagt skal drives ansvarfuldt
Jagt og viltforvaltning, der blandt andet har til formål at beskytte viltet og dets levebetingelser, er udbyttet af etablerede og etablerende. Loven regulerer jægten efter en række principper og der må ikke jages på en måde, der udleder viltet for uretlig kløbet.

Der vil fremover blandt andet i forbindelse med revisionen af jagtloven, være stort fokus på at jagtregnskaber skal kunne dokumentere deres skydetilgængelighed, for hermedens jægere skal analysere færre stykker vilt.

www.naturstyrelsen.dk

Færre anskydninger, tak
På Naturstyrelsen hjemmeside www.naturstyrelsen.dk kan du forebygge af anskydninger og Du kan blandt andet finde alle undersøgelse om anskydninger fra 1996 frem til 2012.

Færre anskydninger, tak

For vildtets skyld

Højt antal af anskydninger. Det gælder særligt, om jægten foregår i søer eller vand. Derfor er det vigtigt at følge disse enkle råd

- Jægeren skal altid foretage korrekt afbækkervurdering
- Jægeren skal være sig bevidst om sæne
- Jægeren skal vælge god moral, sans for etik og udvise ansvarlighed

For at nedbringe antallet af anskydninger er det også vigtigt, at man kender de anbefalede maksimale skudafstande for vilt. For huder skal sig til disse anbefalinger: vil færre stykker vildt blive anskudt.

Råvilt: Max. 20 meter
Ræv og gås: Max. 25 meter
Øvrige arter: Max. 30 meter

Overensvante afstande gælder kun i den mest punktligt situation for eksempel søer eller spidskud i andre går på jagt, der være opmærksomme på følgende:

- Alle jægere skal påtage sig ansvaret for at nedbringe antallet af anskydninger
- Alle jægere skal aktivt foretage afbækkervurdering
- Alle jægere skal følge afbækkervurdering
- Alle jægere skal følge afbækkervurdering
- For at nedbringe antallet af anskydninger
- Du bør altid skyde med høj moral, sans for etik og udvise ansvarlighed
- Forbrug af patroner bør ikke overstige tre per redtligt stykke flyvende vildt og to per stykke skovvildt vildt og fugtlevende

Det kan du gøre for at undgå anskydninger
Resultater fra alle undersøgelser viser tydeligt, at skudafstanden er den absolut afgørende faktor i forhold til et

En ny undersøgelse viser, at der er sket en stigning på cirka fem procent i antallet af skudvundet med hagle i kropper. Undersøgelsen viser samtidig, at den positive udvikling for antallet af ræv og vildtægler med hagle i kropper er stoppet.

Et der med hagle i kropper er et dyr for meget, og derfor er det vigtigt at sætte fokus på anskydninger. Med et godt råd og enkle holdninger kan den enkelte jæger gøre meget for at undgå af anskudt vildt.

En ny undersøgelse viser, at der er sket en stigning på cirka fem procent i antallet af skudvundet med hagle i kropper. Undersøgelsen viser samtidig, at den positive udvikling for antallet af ræv og vildtægler med hagle i kropper er stoppet.

En ny undersøgelse viser, at der er sket en stigning på cirka fem procent i antallet af skudvundet med hagle i kropper.
